What h

☐ Send Anonymously Send

Today's agenda

- Real-world AI use case in benefits and employee experience
- How to integrate AI with what you already have
- What metrics matter to prove impact

slido.com
#2263 073

How many point solutions are currently included in your benefits portfolio?

What percentage of your employees do you believe are aware of all the benefits available to them?

The problem isn't the benefit — it's the experience

80% of employees don't read the benefits materials you send.

50% of U.S. employees are unaware of their employer's health and wellness programs

60% say that don't have time to participate in them

AI tackles 3 big problems created by traditional benefits navigation

- Creates a truly bespoke experience
- Reduces HR burden
- Delivers clear ROI

4 Key Hurdles to AI Implementation

1.

Fear of IT &
organizational
hurdles

2.

Privacy &
HIPAA
Compliance

3.

Open vs.
Closed
Systems

4.

Proving
Cost &
ROI

The image shows three overlapping chatbot windows, each titled "COMPANY CHATBOT".

- Top window:** The chatbot says, "Hi, I can assist with common benefit questions." Below this is a blue button labeled "Get started".
- Middle window:** The chatbot says, "Please pick from the topics below." A blue button labeled "Mental Health & Substance Use" is highlighted. Below this, the chatbot provides information: "In addition to coverage through your medical plan, you and your family have access to free, confidential mental health and substance use resources, including free virtual and in-person counseling. Go to [Mental Health and Substance Use Benefits](#) to learn more." At the bottom, it says "Anything else I can help you with?" and has buttons for "Back to main menu", "Get news and reminders", and "End chat".
- Bottom window:** The chatbot says, "Please pick from the topics below to get started." Below this is another "Please pick from the topics below." prompt. A list of topics is shown in blue buttons: "Eligibility", "Make Changes", "Vacation & Holidays", "Other Time Off", "Health Benefits", "Mental Health & Substance Use", "Wellbeing Wallet", "Health Savings Account", "401(k) Savings Plan", "Discounts & Benefit Extras", "Get Help", "Connect to Fuse", and "Something Else".

Each window has an "Enter your response" input field at the bottom.

The webpage has a header with the title "Mental Health & Substance Use Benefits" and a navigation menu: "Home / Health / Mental Health & Substance Use".

The main content area starts with a paragraph: "When life's moments get challenging, help is available. We provide a variety of confidential mental health and substance use support resources — some at no cost — including in-person and virtual counseling and therapy, expert second opinion services, care advocates, and more."

Below this is a section titled "Have Something on Your Mind? Find the Right Care." with the text: "Click below to find resources that can help you with specific mental health and substance use concerns."

There are two sub-sections:

- Not sure where to start?** Getting care is the priority. We provide benefits to help you get started and find care based on your concern. If you're unsure of where to start, reach out to [Healthy Living](#) (use the company code, P), which provides up to eight counseling visits per issue at no cost.
- If you're enrolled in medical coverage, you may also reach out to [Spring Health](#) where you can take a no cost assessment and connect with a Care Navigator for help finding the most appropriate care. Or connect with [Health Navigator, powered by PinnacleCare](#) to locate expert providers and understand different treatment options for more serious or complex conditions such as substance use, eating disorders, and other mental health conditions like schizophrenia and bipolar disorder.

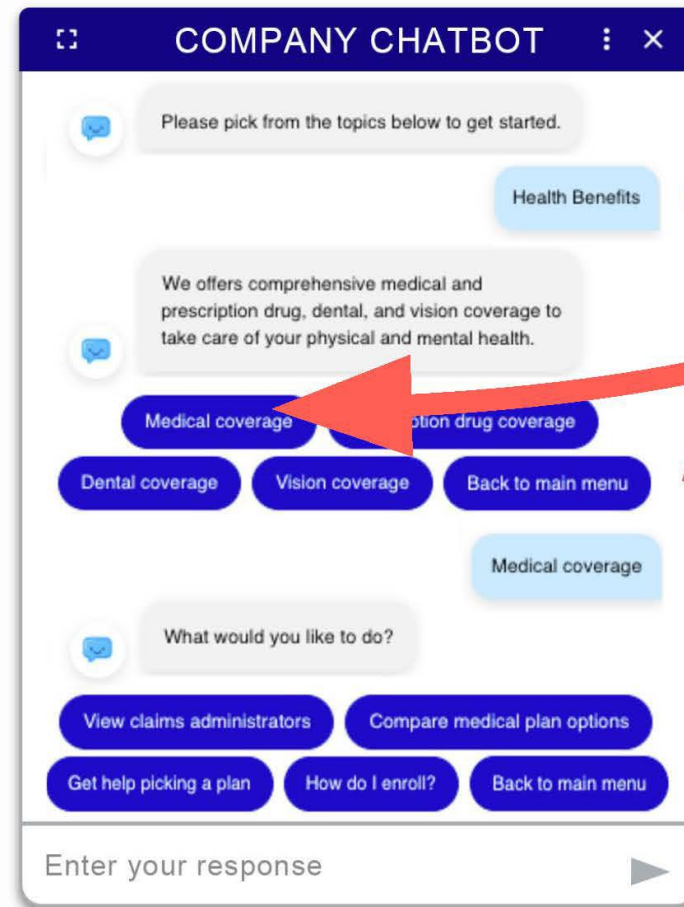

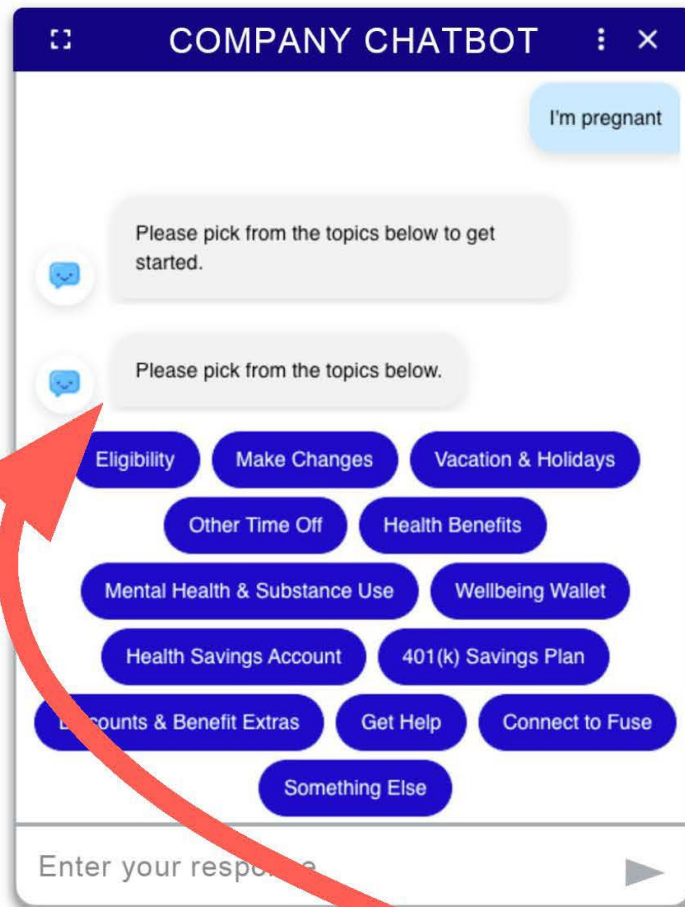

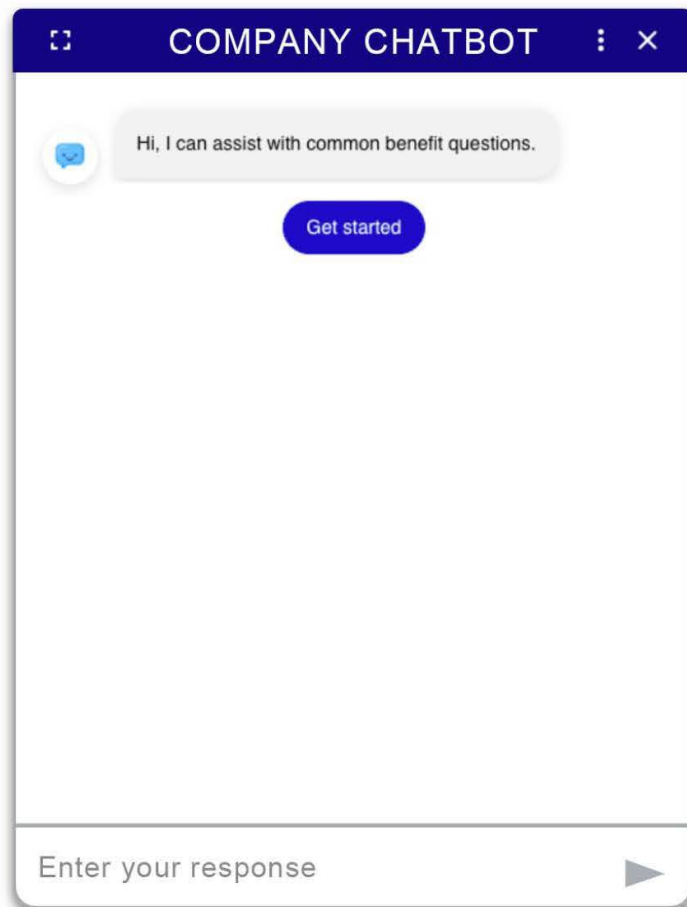

Below these are five resource boxes:

- Managing Relationship Issues or Having Difficult Conversations
- Dealing with Grief, Stress/Anxiety or Depression
- Struggling with Alcohol or Substance Use
- Addressing Suicidal Thoughts or a Loved One's Safety
- Supporting Those with Developmental Disabilities

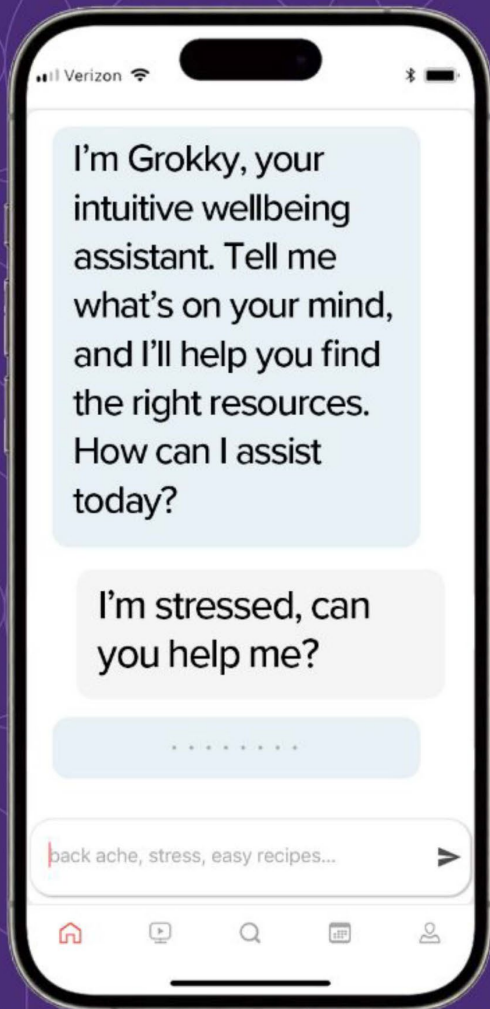

At the bottom is a section titled "For Financial, Legal, Health, or Caregiving Concerns" with the text: "Our emotional and mental health can be impacted by all sorts of life moments. If you need help with [financial or legal worries](#), [health issues](#), or [caregiving concerns](#), We provide resources to support you."

Why Chatbots Don't Work - Another Example

CASE STUDY

10,000 Employee Company

THE CHALLENGE:

- HR overburdened with triage tasks
- Lost productivity from employees searching for answers,
- Underutilization of wellness programs

THE SOLUTION:

GrokkyAi, a conversational benefits agent deployed

- Available 24/7
- Multiple languages
- 60 day implementation

GrokkyAi In Action

- **10,000** health-related employee questions answered
- Average response time **<18 seconds**
- **83%** relevancy (efficacy) rating
- **52% clicked to intervention, 36% follow-up question rate**

Data: November 2024 - April 2025 (6 months)

Your framework evaluating AI for HR benefits

What problem are you solving

What Can AI Change?

What Can You Measure?

What Does Success Look Like?

Clearly define the pain point or gap in your current benefits.	Define the expected impact AI could have on the problem.	Identify the KPIs to track both direct and indirect impact.	Define what a win looks like and how you'll know it's working.
<ul style="list-style-type: none"> • Are you seeing increased claims or costs in a specific category? • Do employees struggle to navigate their benefits or get timely support? • Are engagement or satisfaction levels (NPS, CSAT) low? • Are point solutions under utilized? 	<ul style="list-style-type: none"> • Can it improve the speed and personalization of benefit guidance? • Can it drive smarter triage • Can it reduce your team's administrative load? • Can it nudge members to act? 	<ul style="list-style-type: none"> • Engagement: % increase in solution utilization? • Service: reduction in benefits team inquiries or support tickets • Experience: change in NPS/CSAT scores • Cost: impact on claims or unnecessary utilization Timeliness: % of questions answered within seconds or first touch 	<ul style="list-style-type: none"> • Higher engagement in underused solutions • Better employee experience • Fewer manual tasks for the benefits team • Clear ROI

APPENDIX

General LLM

GrokkyAi

Generalist AI

(e.g., ChatGPT, Gemini, Copilot)

Primary Goal

General platform for specialists to build on

Benefits specialist

Business Model

PaaS - engine for developers

SaaS - benefits solutions for employers

Data Source

Internet

Proprietary, private, curated, sensitive client data
(strict segregation)

Core Logic

Raw general intelligence

Purpose-built, health and benefits specific intelligence

HIPAA Compliance

No BAA, inherent data handling practices that
don't align with HIPAA's strict requirements for
PHI

Application-level HIPAA compliance & liability

Security

Platform security; often uses inputs for model
training

Application-level security for sensitive data; no client
data training

Strengths

Breadth & compute power that enables diverse
vertical specialized AIs

Depth, specialized knowledge, proprietary content,
and ability to customize for each individual client

-  Integrates with private data (benefits plans, eligibility files)
-  Provides purpose-built solutions (cost-effective care guidance, Grokker's content)
-  Commits to HIPAA compliance & liability
-  Trusted, vertical solution for benefits utilization challenges
-  Offers clear return on investment

How We Receive Data Securely

We employ industry-standard best practices for receiving your data securely:

- **Secure Transmission Channels:** You can provide data to us through two secure methods:
 - **API Integration:** Our Application Programming Interface (API) integrations are designed with security at their core, ensuring a protected connection between your systems and ours.
 - **Secure File Transfer Protocol (SFTP):** For file-based data exchange, we utilize SFTP, a protocol that encrypts data during transfer, preventing unauthorized access.
- **End-to-End Encryption:** All data is encrypted while in transit to our services and remains encrypted when stored (at rest). This means your information is unreadable to unauthorized parties, whether it's moving or stationary.
- **HIPAA-Compliant Practices:** Our operations adhere to stringent HIPAA policies, underscoring our commitment to handling all data, particularly sensitive information, with the highest level of security and confidentiality, respecting user privacy at all times.

How We Store Data Securely

Once received, your data is stored and managed within a highly secure environment:

- **Encrypted & Isolated Storage:** Data is housed in an encrypted, limited-access data silo. This silo resides within Grokker's virtual private cloud (VPC) ecosystem, providing a secure and isolated environment for your information.
- **Strict Access Control:** Access to this sensitive data is strictly limited. Only members of our AI team who have undergone thorough vetting and hold the highest security privileges are authorized to access this information, and only on a need-to-know basis.
- **Comprehensive Security Protocols** (Guided by HIPAA Standards): Our commitment to data security, as outlined by our HIPAA policies, includes:
 - **Rigorous Team Member Training:** All relevant team members receive comprehensive training on securing both digital and physical environments, including devices and workspaces.
 - **Proactive Vulnerability Management:** We conduct automated vulnerability assessments to identify and address potential security weaknesses proactively.
 - **Continuous Threat Modeling:** We regularly perform threat modeling exercises to anticipate and mitigate potential security risks, ensuring the ongoing integrity and safety of the data we maintain.

HIPAA Compliant: All interactions and data handling will be structured for HIPAA compliance.

Data Segregation: Each client's data is kept private, separate, and not mixed with other clients' data.

Data Storage: All data will be on US servers (in AWS virginia data centers)

No Data Sharing: User data is never shared with third parties.

Secure Data Handling: Employs encryption for data in transit and at rest, firewalls, and strict access controls.

Anonymized Reporting: Company reports are aggregated and do not expose individual employee interactions. We anonymize data whenever we do not need to identify it.

OpenAI is Not Training on your Data: The underlying LLM does not train on user inputs. We have a BAA with OpenAI that prohibits them from training on your data. Any GrokkyAI training improvements use anonymized data under supervision.

SOC2 Compliance: All of our data is on AWS which is SOC2 compliant.
